

iCONsmart® Modules

The module concept, which originates from the class leading Airflow iCON range, gives you the option of determining how you wish to control your fan, and select the appropriate module functionality. Airflow's extensive research and development of its iCONsmart modules, enables exceptionally versatile controllability within the extractor fan market. Bluetooth technology using myAirflow allows your phone to be the hub of your house at your fingertips. You have never been more in control of your indoor air quality than with iCONsmart fan range.

The module range is compatible with all three size iCONsmart's – 15, 30 and 60 fans, and can be easily interchanged for any desired combination of applications. Each iCONsmart fan has a built-in timer module, accessible via a unique unlock code. The other three modules can be installed with ease. Replacing a module is a lot simpler and cheaper than replacing the entire fan.
